

## **Collicutt Energy Services Becomes Alberta's Distributor of MTU/Rolls Royce Onsite Energy for Diesel Generators**

Collicutt Energy Services is proud to announce that as of January 1, 2022, we are Alberta's distributor for MTU/Rolls-Royce Onsite Energy for diesel power generation.

This partnership now allows Collicutt to offer our clients both diesel and natural gas power generation options, meeting more client needs by providing them with more variety, reliability and customer assistance.

MTU has over 60 years of power generation expertise along with over 100 years of experience in diesel engine engineering worldwide. That knowledge along with Collicutt's power generation experience makes this a very strategic partnership.

MTU's diesel gensets are designed for maximum reliability, featuring low fuel consumption, long service intervals and low emissions to reduce costly downtime. The MTU product portfolio for diesel power generation includes the MTU Series 4000, 2000, 1600, 0080 and 0225 and covers a power range of 27-3,250kW (60 Hz). With mature and reliable design, they are designed to operate in any situation— even in extreme conditions.

The combination of MTU's product offering with Collicutt's in-house expertise in power system design, build, and project management, allows Collicutt to deliver a higher standard of power generation service and products throughout Alberta.

In addition to our current solutions, Collicutt is now able to offer more mission-critical solutions along with other applications that include:

- Data Centers
- Healthcare and hospitals
- Sewage and water treatment
- Hotels
- Airports
- Commercial and public buildings
- Agriculture
- Aquatic Centers
- Government buildings
- Greenhouses
- Landfills
- Industrial manufacturing
- Nuclear power plants
- Rentals
- CHP
- Residential and utilities
- Power stations

Collicutt continues to lead the power generation industry throughout North America and beyond. Our relationship with MTU/Rolls-Royce Power Systems started in California in 2015 and has continued to grow since. In June of 2021 we also announced the new agreement regarding the distributorship of natural gas power generation and oil & gas engines in Alberta. This 2022 announcement is quite the milestone as it gives Collicutt the advantage of offering our clients more comprehensive power generation solutions since both natural gas and diesel options can be utilized.
